SOLBIAN ENERGIE ALTERNATIVE

> More about SOLBIAN ENERGIE ALTERNATIVE

In the photovoltaic sector since 2007, SOLBIAN is now an established entity in the manufacturing of flexible solar panels. Born from the encounter between the most important Italian sailor, Giovanni Soldini, and an affirmed physicist, Marco Bianucci, the Turin-based company represents their will to bring solar energy on racing yachts.

Innovation, efficiency, lightness have become with time the core features of SOLBIAN products. The payoff "Freedom powered by the Sun" describes in just a few words the essence of this institution, which year after year has worked hard to guarantee energy independence to its costumers thanks to the unlimited power of the Sun, all the while respecting nature and the environment.

A company that has been chosen by many affirmed sailors, who have tested the durability and power of these solar panels in the toughest conditions: Giovanni Soldini himself, the first to use Solbianflex panels during his competitions, Matteo Miceli, Michele Zambelli, Andrea Fantini to name a few.

Driven by an inexhaustible passion, SOLBIAN has never stopped investing in technological development, counting on the continuous evolutions in the fields of polymer chemistry and electronics.

SOLBIAN mainly operates in the aerospace, automotive, clean tech and smart manufacturing fields.
