> More about SCANFERLA BRUNO

Scanferla is an Italian company with consolidated international experience in the **supply of metal components, specialised in sheet metal molding**, and in the assembly of metal parts for small, medium and large series. Founded in January 1981, Scanferla S.r.l. has **over forty years of experience in the design and construction of single and progressive dies** for different sectors

Thanks to its integrated expertise in progressive die design and in-house production, Scanferla is able to offer **turnkey technical solutions** from project development to delivery of finished components to customers according their logistics requirements.

Dies used for series production are 3D in-house designed with our CAD systems and manufactured by Scanferla own experienced designers and toolmakers.

Our production includes sheet metal stamping in small, medium, and large volumes of parts and components in steel, brass, bronze, copper, and aluminium, as well as assembling and welding.

SCANFERLA BRUNO

Our professional team has developed the right important skills to understand and conform to Automotive OEM processes, procedures and quality expectations with over 20 years experience in this sector.

Scanferla distinguishes itself in the market through a high level of service offered to its customers: reliability, competitiveness, total quality are the strengths on which our company relies for new challenges and opportunities in the future.

The long experience acquired by our technical staff during 40 years on the international markets allows us to meet the specific demands of various industries including Railway, Automotive, Electrical Tools, Electronics, Electrical, Household Appliances.
