> More about DE.TEC.TOR. Devices and Technologies Torino

Resulting from years of research experience in particle physics, DETECTOR was founded in 2009, as a Turin University spin-off company, with the aim of industrializing detectors for particle-therapy, an advanced radiation technique for inoperable and radio-resistant tumors.

The company is specialized in the design and manufacturing of high-performance medical devices, for the monitoring and verification of therapeutic particle beams both during patient treatment and daily quality control of the particle accelerator. During these years DETECTOR has had the opportunity to carry out various research projects, enhancing scientific, engineering and management expertises.

Nowadays DETECTOR can offer particle physics solutions for different applications to help their Customers improving their manufacturing processes and clinical procedures.

DETECTOR has the ISO 9001 and ISO 13485 certified system quality management which constantly helps them setting up the business processes with a customer-oriented approach and towards a continuous improvement of skills and services.

DEVICE & TECHNOLOGIES Torino mainly operates in the aerospace, agrifood, automotive, cleantech and health & wellness fields.
