

Argotec S.r.l.

> More about Argotec S.r.l.

ARGOTEC is an Italian aerospace engineering company founded in 2008 in which research, innovation, and development involve various fields: engineering, information technology, systems integration, "Human Space Flight and Operation", implementation of solutions in the field of renewable energy, and design and production of small satellites.

All these activities have the same objective: realization of systems for space with potential Earth applications. In fact, according to the company vision everything that is useful for space activities can have an Earth application, bringing benefits in daily life and responding to needs not yet met.

Since the beginning the company has always collaborated with the main international space agencies such as the Italian Space Agency (ASI), the European Space Agency (ESA) and the NASA, had promoted the development of innovative technologies which involved universities, research centres and other companies with skills and different backgrounds.

This has been concretely translated into partnerships with companies coming from fields other than aerospace. It allowed the realization of innovative systems in order to obtain several patents and international awards.

In recent years ARGOTEC has demonstrated its excellence at a national and international level thanks to its dynamic and flexible working methods supported by a young team of professionals with an average age of 29 years old.
