> More about ISAG

Rubber, silicone, metal-rubber items produced through moulding injection process. Thanks to the different tonnage of our machines, we can produce items weighting less than a gram up to 4kg. Moreover, we work with all kinds of rubber, like, EPDM, FKM, AEM, ACM, VMQ, FVMQ, NBR, EPI, CR. Our experienced know-how allows us to play a consulting role with our customer needs, being a guide during product development phase. Isag Srl has got an artisanal approach: focusing on quality rather than quantity, manufacturing articles requiring visual checks and post-processing manual finishing and testing, due to their delicate geometry and application. **Some examples of our production: collaboration with a Made in Italy brand resulted in the production of the most iconic detail in various bag models or umbrella handles in particular silicone of exquisite design.**

ISO 9001:2015 certified.
