> More about Tekfer

Alutron S.r.l. is specialized in the design, prototyping and serial production of advanced infrastructure and enclosures solutions for electronics, IT and Data-Center Applications. The range offered consists of Racks, Sub-Racks and Sub-Units and all relevant components and accessories for the housing of electronics devices in areas where high levels of Reliability are required: Railways and Naval Transportation, Telecommunications, Industrial Automation, Data-Centers.

Over 40 years of experience in modular mechanics and the know-how and expertise of Alutron's Research and Development Department allow the production of standard mechanical components and ,above all, the realization of customized solutions aimed to satisfy specific Client's requirements. The complete management of robotics machinery and robots for different machining and assembly operations allows a high degree of flexibility combined with the efficiency of serial production.

In 2023 Alutron acquires Neohm Componenti, giving life to its Electronic Division.
