> More about Innovatech3d

Innovatech3D designs and manufactures prototypes using both rather classic Rapid Prototyping and Additive Manufacturing technologies such as silicone molds, stereolithography, FDM, sintering and RIM technologies, as well as more innovative technologies. In fact, the company's goal is to be on the market with the most advanced technologies.

We offer service tailored to the customer's needs to provide support through even one of the development or fine-tuning phases of a product. Quality and punctuality: Strict security protocols to protect the idea and its originality. High quality and functional standards. The development of a project is guaranteed in total compliance with the established timeframe and confidentiality
