## > More about BONINO

Founded over seventy years ago, the Italian company BONINO is today the world leader in the design and construction of self-loading cutter wagons.

The BONINO self-loading cutter wagons, called TRISYSTEM, carry out three activities at a single stage of work: they cut the grass, load it onto the wagon and automatically distribute it in the manger of the stable. This ensures perfect cleanliness of forage and maintains all its nutritional properties.

The unique features of the BONINO self-loading cutter wagons allow producing premium quality forage to feed the cows ("ZERO GRAZING") with fresh grass: a diet known to be more qualitative that translates into high-quality milk and meat production. Milk, for example, will be rich in CLA (conjugated linoleic acid with antioxidant and anti-cancer properties) bearer of many health benefits. Feeding cows with fresh grass helps to reduce feed costs, increases milk production, and raises profits.

# BONINO

BONINO is also a specialist in the production of Special Machines for harvesting aromatics herbs, medicinal and leafy vegetables. These machines represent the utmost expression of BONINO technology and are custom-built for the customer: dimensions, choice of cutting and collecting systems, carriageway, load capacity, etc. are decided together with the customer.

Among the latest innovations, there is the new super-performing machine for lavender harvesting.

Today the BONINO machines are present in over thirty countries worldwide, spread between Europe, Australia, and America. A capillary and qualified assistance network guarantees an efficient after-sales service.
