> More about SAP

Since 1983, the company has been specialized in the sector of injection molding of thermoplastics and in the production of small- and medium-sized technical items and trimmings for the industry in general and in particular for the automotive, electronics and household goods sectors.

With its dynamic and slim structure, the company is able to provide successfully to small and large volume production requirements.

Their machine range, managed by high specialized personnel constantly updated through specific training courses, consist exclusively of state-of-the-art, microprocessor-controlled presses.

Using this extremely flexible, high-productivity machinery and modern ancillary plants for the treatment of raw materials and for production cycle automation, monitored with searching statistical control procedures in order to guarantee the quality standard required, they are also able to convert even the most delicate materials such as polyurethane and thermoplastic elastomers, reinforced or non-reinforced polyamides, homopolymer and copolymer acetal resins, ABS, in addition to polypropylene, PVS, etc.
