

RIVMEC DI RIVETTI VALTER PAOLO

> More about RIVMEC DI RIVETTI VALTER PAOLO

RIVMEC was born in 1989 and made its way in a field that ranges from simple metal carpentry to the production of mechanical fittings built on numerical control machines, as well as the production of machines and equipments designed to meet the customer's specific needs.

Currently, the company also deals with the construction of machines intended for agricultural mechanization, specifically in the business of nuts harvesting such as hazelnuts, walnuts, almonds with harvesters, pneumatic separators, dryers and all the necessary equipment from the collecting of the product to its packaging with all the intermediate steps such as cleaning, drying and sorting of the nuts.

RIVMEC is able to provide technical, technological and constructive support for the manufacturing of machines or entire plants for the processing of agricultural products.

RIVMEC DI RIVETTI VALTER PAOLO

RIVMEC can offer products on behalf of third parties that range from precision mechanics with fittings produced on numerical control machines as well as both turning and milling operations, production of machines or equipment upon request and the simple production of metal carpentry.

The machines can be built following the project provided by the client or it is possible to carry out research and design according to the information provided by the client.
