

ITHACA - INFORMATION TECHNOLOGY FOR HUMANITARIAN ASSISTANCE, COOPERATION AND ACTION

> More about ITHACA - INFORMATION TECHNOLOGY FOR HUMANITARIAN ASSISTANCE, COOPERATION AND ACTION

The non-profit association ITHACA, based in Torino, Italy, is a centre of applied research devoted to support humanitarian activities in response to natural disasters by means of remote sensing techniques.

The association was founded in 2006 by Politecnico di Torino, with the financial support of the Compagnia di San Paolo and its operational team is composed of experts from the academic, industrial and scientific environments with deep experience in several of the domains concerning geomatics, such as remote sensing, photogrammetry and Geographic Information Systems (GIS).

ITHACA undertakes comprehensive operational and research activities in the field of geomatics for the analysis, evaluation and mitigation of damages caused by natural or man-made catastrophes.

The provision of EO data products and services based on satellite image processing is one of the core activities of ITHACA since its foundation, representing the bridge between its scientific competences and their practical application for the benefit of the broader community.
