> More about ALBASOLAR

50 years of installations in Italy and around the world have made the Marengo Group a solid and extensive experience in the industry, even made stronger by specializations launched during the last decades and substantial shape in a corporate structure which today consists of three divisions: Marengo electric installation, ALBASOLAR and ALBASYSTEM. Marengo electric historical division of the company that deals with industrial and advanced electrical systems; ALBASOLAR that deals with the construction, installation, service and maintenance of solar and photovoltaic systems; Albasystem division was founded in 2012 initially as a spinoff experience of ALBASOLAR, has always specialized in offering solutions for energy saving-oriented in integration of renewable sources, it now stands as a partner specialized in advanced technology solutions for the industry 4.0, for energy saving and efficiency of management systems energy in production processes.

Albasystem began to study, design and implement a new system that can not only to significantly reduce energy costs and make businesses energetically self-sufficient, but above all to

ALBASOLAR

generate a big reduction in personnel-related costs and manage the energy used within the plant, complementing the positive effects on the entire optical industry 4.0 the production process. This has come the new patented automation of energy cogeneration processes, self-production, self-consumption and continuity ASPEC, executed entirely by Albasystem to meet the needs of an industry that now, to grow and evolve, requires an advanced technological support for the integration of systems oriented to maximize the savings (energy and personal), thus freeing up resources to be used for other tasks.
