> More about EntsorgaFin

In 1997 two Italian entrepreneurs took a hard look at the current requirements for protecting the planetary environment and came to the conclusion that any effective strategy needed to implement only the best and most reliable among available technologies. So they decided to found an engineering company which included an industrial production chain deeply involved in each single stage of the waste disposal and recycling processes, as a powerful step towards attempting to solve the effects of widespread, ever-growing pollution and climate change. ETSORGA is born.

Today, in over two decades, ETSORGA has developed a remarkable number of solutions in the fields of waste management and energy production and is a key player worldwide in providing proprietary technologies for many different solutions like composting, alternative fuel production and biostabilization.

The company currently operates over four continents, Europe, Africa, North and South America and is able to define and actualize specific solutions, including landfill diversion and recycling targets, that are tailor-made to meet all the customer's requirements.

EntsorgaFin

ENTSORGA'S mission is to focus on studying, developing and implementing new proven and bankable proprietary technologies to recover and valorize waste that can be therefore repositioned in the productive cycle.
