## > More about ATECO POLIMERI

ATECO is an Italian family company, founded in Anzola in 1993 by Mr. Ugo Angelucci and specialized in the recovery, grinding, recycling and upcycling of waste electrical cable scraps and soft pvc plastic waste. Over the years, the start up of PVC regeneration and trade production processes has led to the opening of a second production site at Vogogna, entirely dedicated to the processing of polyvinyl chloride.

Thanks to the second and now third generation, the company continues to invest in research and development to become more competitive on the market. Professionalism and experience have enabled the company to qualify for the first places in Italy in terms of product quality and service efficiency. This thanks to the presence of a highly specialized team that monitors and organizes the production process in a careful and constant manner. The company is organized in two branches, one in Vogogna specializing in PVC processing and one in Anzola d'Ossola, where all copper and other non-ferrous metals processing are concentrated.
