> More about ROOFINGREEN

Roofingreen® is a unique, modular flooring system designed to provide elegance, comfort and performance to outdoor spaces. The perfect solution to create eye catching, sustainable greenroofs, roof terraces, decks & balconies, patios & courtyards, gardens, pet and playground areas. The interlocking, multi-layer tiles with a surface of artificial grass have a distinct natural appearance, superior comfort, height adjustable, unmatched drainage capacity, low weight and at the same time high structural load resistance and stability.

In 2023, Roofingreen® has launched Dbase, an innovative support system for ceramic tiles that integrates perfectly with the grass tiles. Sustainable, as witnessed by the EPD certification, and durable, Roofingreen® combines refined Made in Italy design with superior technical performance in a wide range of architectural contexts.

With over 800 projects completed, Roofingreen® is rapidly gaining acceptance from high-profile architects, landscapers, and designers worldwide.
