> More about Marcopolo Engineering

The company carries out ecological research for the preservation and proper use of natural resources. It designs, builds and manages plants for the treatment and valorisation of solid urban and similar waste, zootechnical waste, agro-alimentary by-products and biogas for the production of energy, biomethane and soil improvers which are sold on the market.

It also designs, builds and manages other plants for the production of energy from natural resources, wind and photovoltaic energy and integrated agrophotovoltaic plants on the whole Italian territory and abroad.
