

Enerpaper

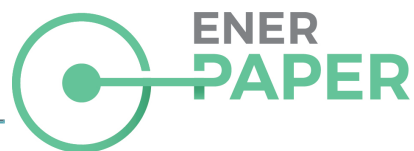

> More about Enerpaper

Enerpaper has developed a technological breakthrough in thermal insulation market; it leverages an innovative production process, which results in significant performance advantages, lower costs, and faster installation. Moreover, thanks to the lower amount of chemicals used, it ensures healthy indoor environments. Enerpaper blow-in insulation can be used in both new construction and retrofit works. It is applied in wall cavities, roofs, attics, and grants energy cost reductions of up to 50-60% for a standard house. Enerpaper has also developed a special automatic blowing machine.

The economic strength of Enerpaper is the cost advantage. Due to the innovative production process, fixed costs are extremely low. Moreover, thanks to the international patent and the dimension of the potential market, Enerpaper can sell his product worldwide, acting at international level.
