> More about FILIPPO RUSSO SRL

MANIFATTURA RUSSO FILIPPO is a plastic recycling company born in 1990, located in Lessona, northwestern Italy.

In its first years of activity the main focus was on managing Biella area, world famous textile district's plastic scraps.

From that time, things have broadly changed. Today the company's core business is in the management, recycling and process of industrial polymeric wastes, with a deep focus on Technopolymers (PA, PC/ABS, ABS, PET, PC, PBT, PPO, PMMA, PS, PPS, PSU, PPA, PARA, POM, PTFE, etc.) and Biopolymers (PLA). Polyolephins (PP, PE) complete the product range.

The collection of the scraps covers several industrial areas (Food, Automotive, Electronic, Textile, Biomedical, Aerospace etc.) and polymeric families allowing Manifattura Russo Filippo to offer more than 100 different products.

In addition to Technopolymers, our company have developed a recycling process for Biopolymers.

PLA (PolyLactic Acid) covers now 10% of the total production of the company, attesting how much MANIFATTURA RUSSO FILIPPO trusts and relies on the new forms of polymers that are starting to populate consistently the market.
