> More about Paneco Ambiente

PANECO AMBIENTE with its own principles of environmental, social and economic sustainability, it proposes on the international market concrete, functional and ecological solutions aimed at protecting the environment, especially against a problem, that of global pollution.

The soil improvers of the Humus AnEnzy® range come from an integrated process, aimed at enhancing selected biomasses (animal manure, agricultural vegetable by-products). The production process boasts, in addition to the selection of raw materials, the complete traceability of the supply chain, offering quality guarantees that are often unattainable in the compost sector.

Our products are particularly recommended for integrated, organic and biodynamic farming.

The EnzyVeba® Line products have been patented and created for the immediate control and reduction of odor emissions in various industrial and environmental sectors, for bioremediation and for the control of biological degradation processes.

Paneco Ambiente

The products, completely natural, are made up of consortia of microorganisms (non-GMO) and vegetable oils that act as veritable abatements of odorous emissions and NOT as simple covering products on the market.

EcoCandy® Line - The 100% biodegradable solution for natural management of your pond and water mirrors. It prevents eutrophication, controls phytoplankton and acts on organic matter dissolved in water. It can be used in various types of water, from ponds, which are decorative, domestic (Koi carp, red fish, water lilies, etc.), sport fishing ponds, fish farms, golf courses, fountains, bio-pools, tanks and industrial storage tanks.
