## > More about GREEN ECO WASTEWATER SRL

**GreenEco Wastewater** is an innovative company specializing in advanced wastewater treatment solutions with a strong commitment to environmental sustainability. We design and deliver **customized, modular systems** that are compact, mobile, and easy to operate.

Our purification plants—available in skid-mounted or containerized formats—combine multiple treatment phases (primary, biological, sedimentation, and tertiary) to ensure full compliance with discharge regulations, including Italy's Legislative Decree No. 152/2006.

We work with both public administrations and private companies, developing tailored solutions based on each client's specific needs. All our systems are built to be **simple to install, intuitive to use, and quick to deploy**, helping customers maintain operational continuity without delays.

Thanks to their compact design, our systems are ideal for temporary or mobile applications in industrial settings. They are engineered for low energy consumption, supporting both environmental goals and cost savings.

We prioritize **sustainability and efficiency**, offering technology that enables **water reuse** and reduces environmental impact. Our services don't end with delivery—we provide **ongoing support**, including **remote monitoring** and **scheduled maintenance**, to ensure optimal long-term performance.

At GreenEco Wastewater, we don't just treat water—we protect the environment and empower our clients with smart, reliable, and future-ready solutions.
