

NORD ENGINEERING SRL

> More about NORD ENGINEERING SRL

NORD ENGINEERING is an Italian company with over 25 years of experience in the design and manufacture of automated collection equipment, which has resulted in the SYSTEM EASY.

The automatic system EASY is composed of an equipment operator bilateral automatic mono-operator, able to collect in a fully automatic manner different types of road containers with low environmental impact, both surface and underground.

NORD ENGINEERING containers represent an innovative concept of waste separation, in which individual units are integrated into the urban landscape and can be installed in any type of urban environment.

The set of vehicles with the automatic EASY equipment was designed to increase the productivity of waste collection services in consideration of the four requirements, which often seeks solution: Ensuring the affordability of the service; Speed up and simplify the emptying of the containers; Prevent the slowing of traffic; Reduce the frequency of passage.

NORD ENGINEERING SRL

The automatic EASY is completed with the washing unit for cleaning and sanitizing of containers and is characterized by the high quality of service, productivity, functionality, safety, durability, consistency, versatility, flexibility, low environmental impact, aesthetics, convenience.

The EASY system is used throughout Europe (Italy, France, Spain, Turkey, Romania, Russia, etc.), in several countries of South America (Argentina, Peru, Uruguay etc..) and is spreading around the world with great user satisfaction.
