

DEMAK

> More about DEMAK

Since the early eighties, DEMAK has been producing room-pressure and vacuum equipment for the meter-mix of epoxy, polyurethane, silicone, polybutadienic resins suitable for potting and encapsulating, vacuum casting, gluing and bonding, gasketing, and coating of industrial components. The use of resins to improve reliability and performance of electro-mechanic and electronic components is well-known and such applications are constantly growing and developing. The DEMAK Group is specialized in offering standard as well as tailor-made solutions to face such production requirements at the highest level of quality. In the range of products are also available stand-alone units and XYZ robots up to fully automatic lines capable of meeting any production needs.

DEMAK mainly works in the automotive and smart manufacturing fields.
