

SFC COMPOSITI

> More about SFC COMPOSITI

SFC COMPOSITI was founded in 2003 as an industrial evolution of FESTA SAS, a company working since the 80's in the development and production of parts in composite material.

SFC COMPOSITI has immediately turned out as one of the brightest Italian reality in the production of items in carbon fiber, fibreglass, etc. for the motorcycle business.

The experience of the founding members and the excellent reputation of the brand have made possible for the company to focus the attention over its short life to a larger field, in particular to automotive business, which is at the moment the core business both for turnover and care, and the aerospace business.

SFC is specialized in producing parts in composite material and in particular prepreg carbon fiber. They can make engineering, Model master and all the necessary tooling for production. They have a quality department than can measure every components and make a dimensional report with Polywork.

SFC COMPOSITI mainly operates in the aerospace and automotive fields.
