

GHIGGIA INGEGNERIA D'IMPIANTI

> More about GHIGGIA INGEGNERIA D'IMPIANTI

Ghiggia works in the construction of electromechanical equipment and systems since the late '30s.

The company staff is composed of about 35 employees.

Every aspect of the design is entirely developed by our technical team. All our projects are featured by a turnkey development process that integrates research, feasibility study, consulting, preliminary and detailed design, construction, management and supervision in all phases.

Ghiggia specializes in the design, development, and construction of stand-alone machines and lines for plastic and metal welding, assembly, testing and handling.

As for assembly, we have a wide experience in automatic and robotized lines, rotating tables, benches, and equipment.

We are also active in biomedical and general automation, both for new projects and for the refurbishment of existing systems. Other sectors are automotive, cleantech and smart manufacturing.
