

LCA BALLAURI

> More about LCA BALLAURI

Company founded in 1975. For 15 years now, LCA has studied and designed innovative products for the Railways Industry. LCA's core business focuses on sensors and connection systems assembled in the axle-box of high speed and long-distance of trains and metros.

Strong technology and skilled human resources: these elements enable LCA to sharply meet the standards of the most demanding customers in the railways and automotive fields. One of the major milestones of LCA is represented by the research and design of advanced electromechanical solutions implemented through "Co-Design" projects.

The use of the latest technologies, specialized expertise and high standards of service are our strong points.

The company's mission is to serve the market designing and manufacturing mechatronics and electromechanical solutions.

LCA works with its customers in Co-Design mode, according to their technical system specifications.

LCA mainly operates in the automotive and smart manufacturing fields.
