## > More about Esi Italia

Esi Italia designs and develops pneumatic suspension systems for the automotive industry. We design and produce a prototype, then a medium series, in co-design with our customers and other industries. Recently we developed a new electronic controlled air suspension suitable for a large range of vehicles (tested for example on some hybrid taxis used for London Olympics Games). Another accomplishment is a prototype of 4-corner-air suspension for trucks and we are developing an application for OEMs.

So far we have started 1200 projects, for the most important vehicles in Europe. Our catalog is the widest in Europe.

ESI Italia is certified with 9001:2008.

ESI ITALIA mainly operates in the automotive and smart manufacturing fields.
