## > More about O.M.A.

The core business of OMA is the engineering and manufacturing of sheet metal and aluminum automotive prototype components. OMA is also capable to provide prototype sub-assemblies and complete vehicles. Major references are already available with primary European OEM's and their Tier 1 suppliers.

The company has recently gone through an intensive investment program to expand its activities to low and medium volume production. Two robotized tandem lines have been installed in the plant of Druento with a capacity of 60.000 hits/day.

In 2018 OMA expanded its footprint through the acquisition of a 25.000 m2 plant in France near Nantes. This further development allows OMA to double its capacity and become a major player in the European stamping market.
