> More about SCAMER

Since 1965 Scamer S.r.l. have been specialising in pipe bending and welding, whichever the pipes and their intended use and can process an extremely wide range of metals: copper, brass, steel, stainless steel, titanium, Bundy and aluminium.

Scamer S.r.l. supply simple and complex pipes, with welded sections (MIG/MAG/TIG welding and brazing) and various types of accessories (fittings, brackets, ring screw fittings, nuts, flanges), in small and medium sized series and from both customer drawings and customised samples. Products with either fixed or variable radius can be processed, as well as different types of tubes: round, square or profiled section bars, round rods. We can process pipes and tubes with diameters ranging from 4mm. up to 100mm. and of any length up to 6 mt (19.7 feet).
