### > More about ELECTROFIT SYSTEMS S.R.L.

ElectroFit Systems was established in 2023 as an Innovative start-up & Spin-off of the Politecnico di Torino to design and produce integrated, highly configurable and ready-to-use electric propulsion systems.

ElectroFit Systems focuses on integration activities and in particular on the development of propulsion system management software using a certifiable automatic code production process (eV-Cycle™).

ElectroFit Systems uses an integration and testing methodology to reduce development time and optimize reliability and security requirements (Digital Triplets™).

ElectroFit Systems takes care of the certification and homologation of the propulsion system in accordance with the main automotive regulations on electromagnetic compatibility, thermal behavior, electrical and functional safety, consumption (ECE R10, R85, R100, R101, ISO 26262).
