## > More about SPEED

SPEED Motorsport is an Engineering company focused on whole vehicle development in particular for racing cars, restomods and road cars with a strong background of engineering and program management activities carried out for OEM car manufacturers. Having a network of trusted partners, we could lead the development and production of parts, sub-assemblies and complete vehicles.

FUSINA® is founded in the midst of the '60s, when Roberto Fusina started a sports cars accessories shop. Thanks to the experience gained as Abarth test driver, Roberto then started a production of steering wheels and sports seats, equipping some of the most important cars of the time. We are now bringing back the brand to its former glory.

From 5 years, we are also partnering with the market leaders to develop sim racing products.
