MANCIN

> More about MANCIN

Mancin was founded in 1981 and nowadays employs 11 workers on two working shifts with an overall surface of 1,500 sqm. Thanks to its experience in precision mechanical machining, Mancin has become well known as a flexible and efficient company.

Production is organized in different departments: a comprehensive range of multi-axis CNC milling and turning machinery including a horizontal spindle grinder and an engineering department. The company also provides, in a dedicated structure, a functional unit assembly service with the integration of third-party components, as well as a 3D Metrology Lab Unit to ensure quality and specifications standards for different sectors and industries.

Quality and customer service are the key to steady growth and continuing success.

Mancin can also offer solutions for customer's requirements such as surface treatments, assembly, laser cutting, etc. by using its own approved suppliers.

Mancin mainly operates in the automotive and smart manufacturing fields.
