> More about EMMEVI RUBINETTERIE Srl

Since 1977 EMMEVI has been in the forefront of the taps and fittings production for bathroom and kitchen and the main objective has always been customer's satisfaction. The production is performed at the modern plant in San Maurizio d'Opaglio which occupies a covered surface of 10.000 square meters with a production cycle carried out in all its stages within the Company. All this has been made possible due to strong investments performed during recent years. The quality of the products is a moral commitment present in every stage of the working process and is established by essential factors which have played a leading role in the acquisition of a solid national and international market.

The raw material of the products, whether of brass bars or ingots, is provided with certificates, which certify the alloy they are composed of. Internal complete cycle processing allows to reach an optimal quality-price ratio. The use of investments, such as design research, technology and computerised equipment, allow the Company to satisfy any requirement from the Italian and foreign market. The design, the certification, the quality of workmanship and prompt deliveries are the strong points of EMMEVI in order to guarantee maximum customer's satisfaction.
