> More about PAT.

PAT. is an award winning architecture firm who endorses an integrated design approach to conceive sustainable buildings, based on the effective use of materials and energy resources. The studio has a varied portfolio ranging from residences to buildings for the hospitality, commerce and workplace both in Italy and abroad for private and public clients such as Région Autonome Vallée d'Aoste, IMG World International, Aspire Katara Hospitality, Katara Project, Birra Peroni, Silvateam, Giobert, National Molding.

Since its foundation in 2006, PAT. has promoted the application of life cycle thinking as the way toward decarbonization of the built environment: a strategy aiming to achieve client goals while balancing economical and environmental concerns. Among PAT. main areas of interest is the sensitive development of delicate natural contexts, blending landscape with buildings which combine passive climate control and carefully crafted interiors.
