ALMEC

> More about ALMEC

Almec designs and manufactures electronic control units, PLCs, operator panels, keypads, radio remote control, radio control receivers, actuators, angular safety sensors, remote diagnostics, satellite interconnection, and geolocation systems, as well as an inclinometer.

Our electronic products are reliable and rugged, adaptable to work in harsh environments, where working conditions severely test the strength of the components.

The proposed devices are installed on board of waste collection vehicles, hook loaders, aerial platforms, cleaning vehicles, agricultural machines, and earth moving machines.

Almec is ISO 9001:2015 certified with a quality management system certified by Bureau Veritas.

Almec regularly invests in research and development and collaborates with several institutions towards continuous innovation. The team of company technicians is characterized by high professional skills, strong creativity, and energy.

Almec mainly operates in the cleantech and smart manufacturing fields.
