> More about AEC SOLUZIONI

AEC Soluzioni is an innovative Turin SME that develops systems to improve people's productivity and plant's efficiency by adopting the latest generation of digital technologies. Thanks to the consolidated experience of the founders, it designs and develops successful software solutions in particular in the MES, Manufacturing Execution System, area.

AEC is associated to MESAP, an innovation mechatronics pole in Italy.

The main product is jpiano®, a software platform that brings the digital transformation into industrial companies. Jpiano® facilitates the communication between humans and industrial elements (machines and robots, IIoT, measuring machines and instruments, sensor networks). In this way, production and logistics become more flexible and lean.

Jpiano® integrates enabling technologies for 4th industrial revolution like Augmented Reality, Cobot, AGV, Cyber physical Systems, Artificial Intelligence, big data.
