Mobility & Smart Cities / Other Sectors

> Other key sectors

Aerospace, Automotive & Transportation, Mechatronics

> More about TRAMA

TRAMA was born about 20 years ago in Alba. During the years, the acquisition of customers from the most advanced leading companies together with the constant updating of our technology brought us to develop key projects by a constantly increasing team.

Pushing the boundaries of technology, setting new higher standards for the industry at large has won us in turn the loyalty of major companies worldwide over the last decade. In addition to and as always, we continually work with exciting projects. Earlier this year the activity was moved to new premises in a strategic location, right in the city centre, thus in a quiet area, with private parking, convenient to all transports and services.

Our core is not only in the microprocessors we handle for our daily work, but first of all is our people. We are proud of our job. TRAMA Engineering is a brand of TRAMA Srl and CONTROLMATICA Srl company group. The headquarters in Alba (North West of Italy) is in one of the most important squares of the town.
