

LIUTERIA NOVA SOCIETA' A RESPONSABILITA' LIMITATA SEMPLIFICA

> More about LIUTERIA NOVA SOCIETA' A RESPONSABILITA' LIMITATA SEMPLIFICA

Liuteria Nova srls is active since 2021 as the first innovative start-up specialized in 3D digital reconstruction of musical instruments for digital museums or collections. Our main focus is on string and wind instruments but we will research ways to digitize the others too!

From our foundation we have been busy defining and setting a standard for musical instruments 3D digitizing and we found in photogrammetry the technique that allows us to obtain accurate and photorealistic 3D models.

We combine more than a thousand photos to recreate a single 3D model, and we developed a portable system that we can bring to the place where the instruments are preserved, avoiding the stress of the transport and the cost of the insurance!

The team is composed of the two founders, both expert violin and guitar makers with experience in musical instruments survey and design.

Along to our digital place we also have a real workshop in Novara where we make, set-up and restore plucked string and bowed string instruments.
