TOP SOLUTION S.R.L.

> More about TOP SOLUTION S.R.L.

We are a small company based in Turin, highly specialized in the development of web applications. Our approach is continuous integration to minimize the occurrence of bugs or errors in the source code.

We use the most advanced open-source technologies to offer our clients the highest performance, freedom from licenses and lock-in, and the ability to choose the most suitable environment.

We create custom web applications and mobile apps (iOS and Android) tailored to the client's business, taking care of the entire process: from requirements analysis to back-end and front-end development.

In the aerospace field, we have developed dozens of management apps for automating repetitive processes and human-machine integration.

Thanks to the experience gained over the years, we have recently developed a defensive cybersecurity solution for securing mobile devices and detecting malware and spyware.

This highly sophisticated solution is available for LEAs and government institutions.
