WETECHNOLOGY - TRASFORMING URBAN MOBILITY

WeTechnology develops advanced technology and platforms for transportation, integrating all available transport services: public transport (metro, bus, and tram), taxis, trains, shared mobility, and parking payment management.

Key Features of WeTechnology

- **Predictable Travel Costs:** Our technology always allows users to know the cost of their journey in advance.
- **Multi-Modal Integration:** Users can compare and combine different available services.
- **Pooling for Sustainability:** Share journeys with other passengers to reduce carbon emissions and travel costs.

WeTechnology has been selected as a MaaS (Mobility as a Service) operator by the cities of Rome, Milan, and Turin. Additionally, we have been chosen for regional projects in Piedmont and Campania.

Our Services

WeTechnology

- **SaaS:** We offer our technology to transport companies, mobility operators, and public administrations.
- **B2C:** We operate Wetaxi, a service directly aimed at end-users, showcasing the full capabilities of our platform.

Looking for Partnerships

1. **Innovative Mobility Management:** Clients seeking a state-of-the-art platform to manage mobility for their customers, employees, or citizens.
2. **Public Administrations:** Governments aiming to implement MaaS services in their territories.
3. **Taxi Companies:** Taxi operators looking for innovative technology to compete with international players like Uber, FreeNow, Bolt, or Cabify.

Join us in transforming urban mobility into a more efficient, sustainable, and user-friendly experience.
