> More about Turin Tech Ind

Turin Tech offers specialized engineering services for the supercar and hypercar sectors, focusing on cutting-edge design and innovation. We ensure high performance, quality, and innovation through the integration of advanced technologies. We deliver tailored solutions from concept to production, leveraging lightweight materials and a network of qualified suppliers to meet homologation, sporting regulations, and technical needs.

Our expertise includes ext. trims, from aerodynamic development and active system integration to prototype and final part production. Int. trims involve full development and production, including upholstery and electronic component integration. In the electrical and electronic field, we offer requirements and systems engineering, model-based and embedded software development, in-vehicle networking, and cybersecurity. We also specialize in functional safety management and diagnostic/testing, helping manufacturers create the next generation of special vehicles.
