Components (for machine tools, molds, etc...) / Firmware / Software / PLC / CNC Design / Fluidic / Lubrication-Cooling Systems / Industrial ICT / MachineTool Design / Maintenance and Revamping / Measuring Machines and Test Benches / Plant Engineering / Production / Robotic for Handling and Assembly / Special Machines / Systems / Supply

INKMAKER

> More about INKMAKER

We produce automated dispensing systems for an array of applications; our systems are used by many among the biggest names in the ink, paint and packaging sectors.

We can produce over 15 different types of dispensers and develop our proprietary software in house. This enables us to customize every single solution to meet specific requirements.

Founded in Italy in 1987 and still in the same private ownership, over the years we successfully built a worldwide presence via subsidiaries in Europe, North and South America, Asia Pacific and China to service clients at any location.

Our hardware is manufactured in Italy, China, and Malaysia. We offer quality, competitiveness, precision, and efficiency and with over 1600 installations made so far.

Inkmaker delivers an unbeatable combination of price, accuracy, customization, and service - which all adds up to an exceptional return of investment.
