Start Power

> More about Start Power

Start Power is an Italian company specialized in the design and production of electrical and electronic equipment for industrial applications.

It was founded in 2009 by a group of professionals with more than 40 years of experience in the sectors of industrial machinery, energy conversion and power control.

We are a team. We work together every day to do our best work and produce quality solutions for our customers. Our company's commercial success is as important as its members' respect.

With the aim of expanding our offer and acquiring new skills, we have recently invested in new projects.

In 2018, we acquired POWER EQUIPMENTS (formerly IRCI), an Italian company producing converters and semiconductors for the industrial and railway sector.

In 2020 we started to design and produce linear power supplies, power amplifiers and electronic loads branded DANA and CEA.

Do you have a project in mind? Let's do it together!

With the experience gained over the years, we have specialized in the design and manufacture of customized equipment in various application areas.

Start Power

The Customer addresses us with an existing idea or project and asks us to realize it; other times, however, it addresses us exposing a problem and we find the most efficient and performing solution.

Joining forces is a start, staying together is a step forward, collaborating is a success!

We Power Your Ideas.
