ENERBRAIN

> More about ENERBRAIN

ENERBRAIN is an innovative startup with global ambitions to increase and promote the energy efficiency in non-residential buildings through a groundbreaking, plug&play, friendly IoT kit, suitable for any kind of HVAC systems.

We developed a revolutionary kit that turns buildings into smarter, healthier and more sustainable ones by using IoT sensors, actuators and machine learning fuzzy logic algorithms.

Our solution can be easily installed to fine tune energy usage in real time, without any changes or replacements to the existing system. The installation takes less than 2 days and immediately guarantees energy saving and better air quality.

Energy Cloud has been conceived around 3 pillars:

- A) Efficiency: we help to save about 30% of Hvac consumption delivering about 18 months payback;
- B) Comfort: we increase indoor air quality (correlation between Temperature and CO2) delivering approx 100% of time in comfort;
- C) Sustainability: we reduce CO2 emission reducing pollution and contributing to save the planet.

ENERBRAIN mainly operates in the smart manufacturing and cleantech fields.
