## > More about RADIA

Radia srl offers a full range of linear motion solutions for all automation applications.

Our telescopic slides and linear rail systems are an essential element of high cycle, controlled precision movement within a diverse range of systems including robotics, automotive, packaging, warehouse automation, machine guarding and tool storage modules, to name a few.

From ground and induction hardened precision rail to rugged, extreme duty telescopic slides as well as a range of electric actuators to power linear motion we can offer a solution for all requirements within the automation sector.

With European manufacturing facilities, a global network of partners and over 35 years of servicing a wide range of sectors, our engineers and sales team can offer the best solution for your application.

Our technical library is available on our website to download; 3D models, drawings and load/life calculations are all accessible for all of our products which are all processed through our rigorous quality systems including ISO9001 and AS 9100.
