

VIBUR

> More about VIBUR

VIBUR is a company of post project management and engineering able to provide a complex service, post contract assistance and executive work management. In our company customers can find highly skilled and qualified professionals, a laboratory that supports the services provided, a solid corporate structure able to deal with complex high value-added initiatives.

Vibur performs traditional and multi-axis milling and turning, and electro erosion machining (EDM).

- We can produce any kind of working, starting from the customer's design to achieve the study for its implementation, in order to optimize work process, ensuring quality and competitive prices.
- The machine tools variety allows us to produce low cost, small and large productions. We meet several needs satisfying large quantities of SMEs as the small amounts of artisans. We also produce prototypes for designers
- All operations are managed through design and programming system at the top of the category, PC CAD CAM CNC.
- We also produce heat and surface treatments (ex. anodizing) taking advantage of external certificated specialists.
- We can certify our products by making high-precision 3D measurements, thanks to the performance of the Brown & Sharpe DEA three-dimensional measuring machine.

VIBUR s.r.l. mainly operates in the agrifood and smart manufacturing fields.
