Electronic and electric system design / Machining, Assembly /
Maintenance, repair, revamping / Mechanical Design

> More about FALETTO MECCANICA

Faletto Meccanica is specialized in the design, study, construction, and refurbishing of special machines, spindles and each type of mechanical assembled unit. We build and refurbish special honing and grinding machines, above all for superprecision and aero bearing manufacturers. The study of a new machine is done by our internal technical office according to customer's need and all the working processes are done inhouse to ensure to our customers the best quality they deserve.
