> More about Industrial Manufacturing Machines

Industrial Manufacturing Machines s.r.l. is a company based in Turin, Italy, specialising in the design and manufacture of machines for metal tube processing to create and accompany any production phase, from the deformation of a single component to the assembly of multiple parts. For years now, the company has been a supplier of increasingly complete and specific solutions and products, aiming to create machines that keep pace with modern requirements in different sectors.

The combination of ideas, intuition, in-depth studies into the feasibility of projects and the proposal of machines and systems that are always at the cutting edge make Industrial Manufacturing Machines a leading company recognised at international level. The company designs and manufactures machines with Energy Saving innovation for various application sectors: manufacturing processes consuming less energy but still guaranteeing the same efficiency as always. The result is better equipment, enabling the company to achieve operational excellence, without forgetting its customers' concern to invest in safety.

Industrial Manufacturing Machines

Machines for tube expansion, reduction, notching, beads, grooves, dimples, bicone forming, flares.

Machines for tube cutting and perforating.

Machines for tube deburring, marking, ridge-locking.

Catalytic converters production lines.

Special machines for industrial manufacturing.
