> More about Mect

Mect is Italian mechatronics excellence also recognized at an international level.

Our company works with the precise aim of keeping high standards of Italian quality to have mechanics interacting with electronics and information technology, to automate production systems easily, facilitating human work.

Our solutions have remote controls embedded with encrypted and secure channels so our customers can monitor machine parameters at any time and are alerted in real-time in case of anomalies.

Mect has pioneered the study of small integrated solutions and first to propose them complete with a PLC, graphics and remote nodes in a single case. We offer customized solutions, hardware, firmware, and software.

The future and innovation are our main concern.

Mect mainly operates in the smart manufacturing and agrifood fields.
