> More about HERNIAMESH

Herniamesh® S.r.l., since 1995, is an Italian manufacturing company of Medical Devices, such as mesh for hernia and abdominal wall surgery, slings and mesh to treat stress urinary incontinence and pelvic organ prolapse; Herniamesh is oriented to a global distribution of its Medical devices and is continuously seeking for new markets.

Herniamesh Medical Devices are the consolidated result of decades of research and development, to ensure products conform to the international quality standards, but we are challenging the increasingly competitive Medical Device market with new ideas put into projects and management.

Thanks to its founder, Ermanno Trabucco, M.D., HERNIAMESH followed the growth and development of the surgical field since the beginning, gaining strong knowledge and experience.
