Enhancers

> More about Enhancers

Enhancers is a factory. We take care of the whole digital product chain: vision, blueprint, design, implementation, evolution and we craft digital products that actually work. End-to-end. From design thinking to the last, chrome-polished line of code. And they're peopleproof.

We've been generating real innovation since 2011 through design thinking, lean UX and Agile production models, applied with a hands-on attitude. Our offering is made of three main stages:

Product set-up

User research, workshops, customer journey mapping, service modeling, technology scouting, business model, product roadmap.

Product design

Information architecture, concept, atomic UX and UI design, prototyping, testing, technical ecosystem analysis.

Product implementation

Hardware set-up, front end components development, back end and services integration, PoC, MVP, product release.
